

IDLtunes installation instructions

Installation:

Put audiere.dll, KRSaudiere.dlm and KRSaudiere.dll into you bin/bin.x86 directory.
(I don't have a 64 bit version (yet)).

Put IDLtunes.pro somewhere in your IDL path.

Alternatively, you can put IDLtunes.sav somewhere convenient (like your desktop) and just double click on that.

How does it work?

Just type IDLtunes at the command line (or double click the save file) and you will be asked to locate the folder with the music files. If you close IDLtunes before it reaches the end of music files to play it will give you the option of starting where you left off.

Keywords:

vertical : if set then the buttons will be laid out in a column

smallIcons : if set then the button icons will be small (to save space)

random : if set then the songs will be played back in random order
